SUMMER 2016
INFORMATION TECHNOLOGIES & SYSTEMS

LIS 7008 Information Technologies & Systems
An entry-level IT course, oriented to all graduate students who want to be IT savvy. This course introduces the students to basic information technology knowledge and skills in today's Internet environment:

• basic computer and networking issues relating to information technologies used in information agencies,
• basic Web design technologies, such as HTML, XML, CSS, Javascript, Multimedia,
• basic database design techniques,
• basic information system specification and implementation issues,
• basic information retrieval techniques,
• basic information security issues.

The course project is to design a website for a real or fictitious organization by integrating all the knowledge and skills learned in the class.

No Prerequisite Needed
