## Graphic Organizer for Problem-Based Courses Example

Restate the problem or question/determine the type of problem
Find the equation of the line perpendicular to the line $y=-5 x+2$ that passes through the point $(3,-1)$.

## Identify Knowns and Unknowns

Known
Line 1: $y=-5 x+2, M_{1}=-5, b_{1}=2$
Line 2: passes through $(3,-1)$
Unknown
Slope 2: $\mathrm{M}_{2}=$
Y-int. 2: $b_{2}=$

## Identify Formula

$Y=M x+b, \mathrm{M}$ is the slope, b is the Y -int; $M_{2}=\frac{-1}{M_{1}}$

## Other Notes

1 lines: Slopes are negative reciprocals $M_{2}=\frac{-1}{M_{1}}$
To find the Answer.
Show your work and write an explanation for each step.
Step 1
Find $M_{2} \cdot M_{2}=\frac{-1}{M_{1}} \cdot M_{2}=\frac{-1}{-5}=\frac{1}{5}$. Find slope of line 2 from slope of line 1.
Step 2
Find $\mathrm{b}_{2} . Y=\frac{1}{5} x+b$. Set up equation for line 2 with slope of line 2 .
Step 3
$(3,-1)=(x, y),-1=\frac{1}{5}(3)+b$. Use the point $(3,-1)$ to find b ( $y$-int) of line 2.
Step 4
$-1=\frac{3}{5}+b,-1-\frac{3}{5}=\frac{3}{5}-\frac{3}{5}+b$. Simplify.

## Step 5

$-1-\frac{3}{5}=b,-\frac{8}{5}=b$. Simplify to find b of line 2
Step 6
$Y=\frac{1}{5} x+\left(-\frac{8}{5}\right)$, Use $\mathrm{M}_{2}$ and $\mathrm{b}_{2}$ to write equation!
Answer (Examine your answer. Is it correct? Is it reasonable?)

$$
Y=\frac{1}{5} x-\frac{8}{5}
$$
