INSTRUCTIONS. Below you will find a series of statements about memory in adulthood. Think of "younger people" as those in their 20's and 30's, and "older people" as those over age 60. Some of the statements are true and some are false. For each item, indicate in the blank space whether you think the statement is true (T) or false (F). If you are uncertain, then feel free to write “DK” (Don’t Know) in the blank space so that you have an answer for every item below.

1. ____ "A picture is worth a thousand words" in that it is easier for both younger and older people to remember pictures than to remember words.

2. ____ Older people tend to have more trouble concentrating than younger people. That is, older people are more likely to be distracted by background noises and other happenings around them.

3. ____ Regardless of how memory is tested, younger adults will remember far more material than older adults.

4. ____ Confusion and memory lapses in older people can sometimes be due to physical conditions that doctors can treat so that these symptoms go away over time.

5. ____ Becoming disoriented (such as getting lost or losing track of what day it is) happens to persons with Alzheimer's Disease, but only in the later stages of the disease.

6. ____ Older people remember to do future planned activities (such as returning a book to the library) better than they remember past actions that they have already completed.

7. ____ Medications that are prescribed by doctors for heart and circulation problems do not affect memory in older adults.

8. ____ Sometimes the effects of intense grief over the loss of a loved one may be mistaken for early Alzheimer's Disease in older adults.

9. ____ A complete physical exam by a doctor is routinely recommended, if a diagnosis of Alzheimer's Disease is suspected.

10. ____ Older people tend to remember specific past events in their daily life better than they remember the meanings of words (vocabulary) and general facts (such as the capital of the United States).

11. ____ Frequent complaining about memory problems is an early sign of Alzheimer's Disease.

12. ____ The only way to tell for sure if an individual has Alzheimer's Disease is to do an autopsy after that person has died.

13. ____ If an older adult is unable to recall a specific fact (e.g., remembering a person's name), then providing a cue to prompt or jog the memory is unlikely to help.
14. ____ When older people are trying to memorize new information, the way they study it does not affect how much they will remember later.

15. ____ If one has lived to be 85 years old and shows no signs of Alzheimer's Disease, then the chances are very high that this person will live out the rest of his or her life without developing the disease.

16. ____ For older adults, the ability to remember something is unrelated to the number of other thoughts or issues on their mind when trying to recall this information.

17. ____ Memory for how to do well-learned things, such as reading a map or riding a bike, does not change very much, if at all, in later adulthood.

18. ____ Signs and symptoms of Alzheimer's Disease show up gradually and become more noticeable to family members and close friends over time.

19. ____ When an older adult comes in for a checkup, doctors and psychologists can now clearly tell the difference between the symptoms of mental health problems and the symptoms of physical illness.

20. ____ Immediate memory (such as repeating a telephone number) is about the same for younger and older people, but an older person's memory for things that happened days, weeks, or months ago is typically worse than that of a younger person.

21. ____ If an older person has gone into another room and cannot remember what he or she had intended to do there, going back to the place where the thought first came to mind will often help one recall what he or she had intended to do.

22. ____ Alzheimer's Disease is the only illness that leads to confusion and memory problems in older adults.

23. ____ For older people, education, occupation, and verbal skills tend to have little influence on their memory.

24. ____ Modern day memory improvement methods that are based on organization (e.g., grouping similar items together) and association (e.g., linking new information to what is already known) can actually be traced back to the ancient Greek scholars, such as Aristotle and Plato.

25. ____ Healthy older adults have trouble remembering how to use familiar gadgets (like a key chain) and appliances (like a can opener).

26. ____ Dramatic changes in personality and relationships with others may be seen in persons who have Alzheimer's Disease.

27. ____ Memory training programs are not helpful for older persons, because the memory problems that occur in old age cannot be improved by educational methods.

28. ____ Lifelong alcoholism may result in severe memory problems in old age.
Louisiana State University Memory Aging Questionnaire

***Key***

1. ____ "A picture is worth a thousand words" is that it is easier for both younger and older people to remember pictures than to remember words. (N-true)

2. ___ Older people tend to have more trouble concentrating than younger people. That is, older people are more likely to be distracted by background noises and other happenings around them. (N-true)

3. ____ Regardless of how memory is tested, younger adults will remember far more material than older adults. (N-false)

4. ____ Confusion and memory lapses in older people can sometimes be due to physical conditions that doctors can treat so that these symptoms go away over time. (P-true)

5. ____ Becoming disoriented (such as getting lost or losing track of what day it is) happens to persons with Alzheimer's Disease, but only in the later stages of the disease. (P-false)

6. ____ Older people remember to do future planned activities (such as returning a book to the library) better than they remember past actions that they have already completed. (N-true)

7. ____ Medications that are prescribed by doctors for heart and circulation problems do not affect memory in older adults. (P-false)

8. ____ Sometimes the effects of intense grief over the loss of a loved one may be mistaken for early Alzheimer's Disease in older adults. (P-true)

9. ____ A complete physical exam by a doctor is routinely recommended, if a diagnosis of Alzheimer's Disease is suspected. (P-true)

10. ____ Older people tend to remember specific past events in their daily life better than they remember the meanings of words (vocabulary) and general facts (such as the capital of the United States). (N-false)

11. ____ Frequent complaining about memory problems is an early sign of Alzheimer's Disease. (P-false)

12. ____ The only way to tell for sure if an individual has Alzheimer's Disease is to do an autopsy after that person has died. (P-true)

13. ____ If an older adult is unable to recall a specific fact (e.g., remembering a person's name), then providing a cue to prompt or jog the memory is unlikely to help. (N-false)
14. When older people are trying to memorize new information, the way they study it does not affect how much they will remember later. (N-false)

15. If one has lived to be 85 years old and shows no signs of Alzheimer's Disease, then the chances are very high that this person will live out the rest of his or her life without developing the disease. (P-false)

16. For older adults, the ability to remember something is unrelated to the number of other thoughts or issues on their mind when trying to recall this information. (N-false)

17. Memory for how to do well-learned things, such as reading a map or riding a bike, does not change very much, if at all, in later adulthood. (N-false)

18. Signs and symptoms of Alzheimer's Disease show up gradually and become more noticeable to family members and close friends over time. (P-true)

19. When an older adult comes in for a checkup, doctors and psychologists can now clearly tell the difference between the symptoms of mental health problems and the symptoms of physical illness. (P-false)

20. Immediate memory (such as repeating a telephone number) is about the same for younger and older people, but an older person's memory for things that happened days, weeks, or months ago is typically worse than that of a younger person. (N-true)

21. If an older person has gone into another room and cannot remember what he or she had intended to do there, going back to the place where the thought first come to mind will often help one recall what he or she had intended to do. (N-true)

22. Alzheimer's Disease is the only illness that leads to confusion and memory problems in older adults. (P-false)

23. For older people, education, occupation, and verbal skills tend to have little influence on their memory. (N-false)

24. Modern day memory improvement methods that are based on organization (e.g., grouping similar items together) and association (e.g., linking new information to what is already known) can actually be traced back to the ancient Greek scholars, such as Aristotle and Plato. (N-true)

25. Healthy older adults have trouble remembering how to use familiar gadgets (like a key chain) and appliances (like a can opener). (P-false)

26. Dramatic changes in personality and relationships with others may be seen in persons who have Alzheimer's Disease. (P-true)

27. Memory training programs are not helpful for older persons, because the memory problems that occur in old age cannot be improved by educational methods. (N-false)

28. Lifelong alcoholism may result in severe memory problems in old age. (P-true)
