**Description of Map Units**

**QUATERNARY SYSTEM**

**Pleistocene - Mississippi**

- **MML**: Describes the uppermost (upper Miocene) deltaic sequence. The unit is characterized by thick, phosphatic sand and fine-grained sediment cover. The surface is occupied by relict surfaces, such as terraces.

**Pleistocene - Holocene**

- **ML**: Represents the Pleistocene-Holocene transition. The unit includes terraces along the Red River and other rivers, as well as relict surfaces.

**Pleistocene - Recent**

- **R**: This unit includes the uppermost Holocene deposits, characterized by sands, silts, and clays.
