# The Cook Political Report / LSU Manship School Midterm Election Poll 

The Cook Political Report-LSU Manship School poll, a national survey with an oversample of voters in the most competitive U.S. House districts, goes beyond tracking the lead in the vote for Congress to offer insights into what underlies the election.

## Democrats lead in the battleground that will determine control of the U.S. House.

Democrats lead in the battleground districts that will decide control of the U.S. House of Representatives. Among registered voters in the 72 most competitive districts, as rated by the Cook Political Report, Democrats lead Republicans $48-36$. This 12 -point advantage has a margin of error of $+/-9$ points. Nationally, the Democratic advantage among registered voters is 7 points with a margin of error of $+/-6$ points.

These competitive districts, the vast majority of which are held by Republicans, also have the highest levels of anti-incumbent sentiment. Where incumbents are on the ballot in these districts, 58 percent of registered voters say their own member of congress deserves to be voted out of office. In contrast, registered voters across the country as a whole split evenly between those who think their own member deserves reelection and those who think they deserve to be voted out of office.

## President Trump is weighing down Republican prospects in the House battleground

Most voters say that President Trump will be a factor in how they vote in the midterm elections, and in competitive districts these voters break nearly two to one in saying that they are voting to show opposition to the president ( 42 percent) versus voting to show support for the president ( 23 percent).

The president's net approval rating in competitive districts, all but four of which are Republican seats, is -24, much worse than his +12 net approval rating among registered voters in safer Republican districts.

When presented with a pro-Democrat message ("We should put Democrats in the majority to keep President Trump in check") and a pro-Republican message ("We should keep Republicans in the majority to keep the economy strong"), 56 percent of registered voters in these competitive districts say the former comes closer to their own view while 42 percent say the latter.

## 2018 feels like 2010, in reverse

Today, 49 percent of Americans feel frustrated about Donald Trump's presidency - the same share who said they felt frustrated about Barack Obama's presidency during the first round of midterm elections in his administration. Indeed, the shares who today say they feel "excited" (14 percent vs 8 percent in 2010), "proud" (17 percent vs 12 percent in 2010), "hopeful" ( 27 percent vs 32 percent), and "helpless" ( 29 percent vs 22 percent) about the presidency are quite close to those from eight years ago. The exception is an uptick in anger, from 25 percent in 2010 to 39 percent today.

The overall similarities in the aggregate mood masks a partisan swap since 2010. In 2010, 55 percent of Democrats and just 8 percent of Republicans said they felt "hopeful" about the Obama presidency. Today, 5 percent of Democrats and 59 percent of Republicans feel hopeful about the Trump presidency. Similarly, Democratic frustration with the presidency grew from 37 percent in 2010 to 74 percent this year, while it fell among Republicans from 70 percent to 21 percent.

## Democrats have edge on interest, but not necessarily turnout

Continuing the pattern of 2010 in reverse, interest in the campaign among Democrats exceeds Republicans. Today, 56 percent of Democrats and 48 percent of Republicans have "a great deal" or "quite a bit" of interest in following news about the congressional election campaigns. Eight years ago, Republicans led Democrats 53 percent to 40 percent.

Additionally, Democrats report engaging in more activities that are political over the past year than Republicans including attending a protest, contacting an elected official, and signing or circulating a petition.

Despite this activity, Democrats do not express a greater likelihood to vote in the midterm elections than Republicans. Seventy-five percent of Democrats either report that they have voted early or indicate a high likelihood of voting in the election, but 79 percent of Republicans do so as well. Of course, turnout among Democratic voters often lags behind Republicans in midterm elections. Closing that gap in this election marks a significant change for Democrats, but it does not indicate that Democratic enthusiasm will exceed that of Republicans on Election Day.

## Americans' confidence in integrity of elections varies by party and media sources

Most Americans (77 percent) are at least somewhat confident that their votes will be counted accurately. When it comes to the threat of interference from a foreign government in November's elections, 52 percent say such interference is not very likely or not likely at all versus 44 percent who say it is likely or very likely. Most Americans (59 percent) also think that voter fraud happens only rarely or occasionally, while 39 percent say it happens somewhat often or very often.

Fifty-four percent of Americans who prefer to get their news from a print newspaper say they are very confident their votes will be counted accurately. However, only 34 percent of those who prefer to get their news from websites or smartphone apps and only 29 percent of those who prefer to get their news from social networking sites express the same confidence.

Although Republicans and Democrats share confidence in the accuracy of the vote count, they split over potential threats to the integrity of our elections. Democrats are more likely to say that foreign interference poses a greater threat to our elections than voter fraud - 64 percent say foreign interference is likely or very likely, but only 38 percent say voter fraud happens somewhat often or very often. Republicans are more likely to say voter fraud poses a greater threat - 52 percent say fraud happens somewhat often or very often, and just 24 percent say foreign interference is likely or very likely.

## Economy and health care top voter concerns, while immigration, trade and guns lag

The economy and health care top the list of issues voters consider very important at 70 percent and 68 percent, respectively. In contrast, recent hot-button issues such as trade, immigration and guns rank relatively low in voters' minds at 36 percent, 45 percent and 48 percent.

The parties diverge somewhat over which issue tops the list. Among Republicans, the economy is the top concern with 79 percent saying it is very important. Among Democrats, health care tops at 80 percent saying it is very important.

## Evaluating President Trump and looking ahead to 2020

Many Americans - including both Democrats and Republicans - said they feel Donald Trump falls short on the traits they consider important for a president to have. For example, the vast majority of Americans (94 percent) think honesty is a somewhat important or very important quality of a president. Yet just 31 percent of Americans feel that the term "honest" describes President Trump somewhat well or very well. The pattern repeats across 13 additional traits featured in this survey: likable, decisive, strong, compassionate, ethical, intelligent, willing to compromise, straight-talker, patriotic, down to earth, cares about people like you, shares your values and unifying. The pattern holds both for Democrats and, to a lesser extent, for Republicans. The biggest gaps between what Americans say is an important presidential quality and what they perceive in President Trump are for honest, ethical and unifying. The smallest gaps are for patriotic, decisive and strong.

Nationally, 62 percent of Americans say they think President Trump deserves to be voted out of office in 2020, and 35 percent say he deserves to be reelected. These responses closely follow the president's approval ratings, which stand at 56 percent disapproval and 36 percent approval in this poll.

While most Republicans ( 78 percent) say he deserves to be reelected in 2020, a sizable share of Republicans (41 percent) said they would nevertheless like to see the president face a serious primary challenge. This is especially high among Republicans in the battleground U.S. House districts, who split evenly between those who want to see a serious primary challenge ( 48 percent) and those who do not (49 percent).

## Methodological Report

The Cook Political Report-LSU Manship School poll was conducted October 10 to October 19, 2018 among a probability sample of 1,486 adult residents of the United States. The total sample includes an oversample of 742 adult residents of congressional districts The Cook Political Report classifies as "tossup" (215), "lean Republican" or "lean Democrat" (278), and "likely Republican" or "likely Democrat" (249). This approach yielded responses from 69 of the 72 districts currently classified as "tossup" or "leaning." Sixty-five of these competitive districts are Republican seats and four are Democratic seats.

Ipsos Public Affairs conducted sampling and data collection for the survey using the web-enabled KnowledgePanel $®$, a probability-based panel designed to be representative of the U.S. population. Initially, participants are chosen scientifically by a random selection of telephone numbers and residential addresses. Persons in selected households are then invited by telephone or by mail to participate in the web-enabled KnowledgePanel®. For those who agree to participate, but do not already have internet access, Ipsos Public Affairs provides a laptop and ISP connection at no cost. People who already have computers and internet service are permitted to participate using their own equipment. Panelists then receive unique log-in information for accessing surveys online, and then are sent emails throughout each month inviting them to participate in research.

Ipsos Public Affairs also conducted the statistical weighting to adjust for differences between sample and known population characteristics that arise from probability sampling as well as differential rates of participation in surveys. Starting with the base weights of the sample fielded, respondents were weighted to represent the age 18+ population with geo-demographics controlled within the targeted and remaining congressional district groups on age by gender, race/ethnicity, census region, metropolitan status, education and household income. The design effect, which captures the difference from a simple random sample due to sampling design and weighting, is 1.38.

The margin of error for the total sample is $+/-3$ percentage points. The margin of error is higher for subgroups as indicated in tables below.

In addition to sampling error, as accounted for through the margin of error, readers should recognize that question wording and practical difficulties in conducting surveys can introduce error or bias into the findings of opinion polls.

Certain questions included in this survey are repeated from a national 2010 midterm election poll also conducted using the KnowledgePanel®. When necessary, these questions were updated with the name of the current president.

The survey was funded by philanthropic supporters of Louisiana State University's Manship School of Mass Communication and the Reilly Center for Media \& Public Affairs.

## Notes for Reading Tables

1. Cells contain weighted response frequencies as percentages. Percentages may not always sum to 100 due to rounding or because select questions allow for multiple responses (as indicated).
2. Sample size in each column is an unweighted count of respondents.
3. The margins of error displayed in columns are for a single estimate from the specified sample in the column; margins of error for comparing multiple estimates from a column or across columns (i.e., the difference between Democratic candidates' and Republican candidates' vote share) will be larger. Columns displaying responses for Democrats and Republicans include individuals who initially do not identify with either party but say they lean closer to one when probed.
4. Voter registration is based on self-report.

Overall, do you approve, disapprove or have mixed feelings about the way Donald Trump is handling his job as President? [Respondents who answered "Have mixed feelings" were probed with: "If you had to choose, do you lean more toward approve or disapprove?" but also allowed to answer "Still have mixed feelings." Leaners grouped with somewhat approve or somewhat disapprove.]

On November 6, 2018, midterm elections will be held. Using a 1-to-10 scale, where 10 means you are completely certain you will vote and 1 means you are completely certain you will NOT vote, how likely are you to vote in the upcoming midterm election? You can use any number between 1 and 10 to indicate how strongly you feel about your likelihood to vote. [Asked to respondents who did not report voting early to: "Have you already voted in the upcoming November general election by going to an early voting location, or by mailing in an early voting or absentee ballot, or not?" Responses to likelihood question collapsed into three categories plus a fourth category for early voters.]

[Randomize order of bracketed text.] Some people have said that [we need to elect a Democratic Congress in order to provide a check and balance to keep President Trump and Republicans in Congress from going too far.] Others have said that [if Democrats take over Congress they will reverse the tax cuts and other things that have enabled our economy to grow so much this year.] [Order of response options matched order in which bracketed texts appear in question wording.]

Do you think that working in politics for many years makes a person a better president of the United States, a worse president, or does it have no impact on how good a job a person would do as president?
