¹All electron microscopy services to be completed at the University of Georgia EM facility (additional referral fee will be applied)

¹Direct Negative Stain accepts cell cultures, lysates, allantoic fluid, or viral pellet suspensions in which the sample is directly absorbed onto a grid with no extra preparation. A contrasting stain is applied and the grid is evaluated.

¹Complex Negative Stain accepts fecal samples and scabs or crusts from veterinary clinics and diagnostic laboratories. The preparation is two-fold: part of the sample is clarified quickly with the supernatant absorbed onto a grid; another part of the sample undergoes differential centrifugation before absorbing a concentrated pellet onto a grid. A contrasting stain is applied and both grids are evaluated.

²IHC test may be available in LADDL as an alternative test (please check IHC fee schedule)

³Molecular and Serology tests may be available in LADDL as an alternative assay (Please check the molecular diagnostics and serology fee schedules)

⁴Please call the lab. Some tests will be performed at another AAVLD accredited veterinary diagnosis lab
